Cygnus Medical Products are Latex-Free
Lapses in the cleaning of reusable endoscope transport trays can lead to cross-contamination in the surgical work area. Bedside cleaning is performed within the Oasis Tray, keeping residual run-off contained. The Oasis Scope Transport Tray offers an economical single-use alternative that protects both patients and staff from contamination and infection.

Oasis® and Oasis PLUS Trays are Latex-Free.

**Oasis® PLUS Scope Transport Tray**

All the benefits of the Oasis Transport Tray now available in a larger size without the cleaning solution reservoir.

Oasis® and Oasis® PLUS Dispensing and Collection

Oasis and Oasis PLUS Dispensing Dolly
Load clean nested trays in the Oasis Dispensing Dolly. The cart features a stainless steel base, 50 tray capacity with lid shelf, removable prep table top, non-marking swivel casters. Dolly color – green.

Oasis and Oasis PLUS Collection Unit
Safely dispose of soiled trays in the Oasis Collection Unit. The unit features a stainless steel base, non-marking swivel casters. Unit color - red.

Biodegradable Liners
Clear plastic liners sized for the Oasis Collection Unit.

Protect endoscopes from damage while protecting staff and patients from infection.

The Kangaroo Scope Transport Pad is both a 41” x 36” table cover and a soiled scope containment bag. When used as a table cover, the Pad’s inner absorbent layer helps to keep the work area clean, preventing cross-contamination and protecting both patients and staff from infection. By pulling the drawstrings placed on each end, the Kangaroo Pad converts from a table cover to a soiled scope containment bag.

Lay the Kangaroo Pad on a flat surface, blue absorbent pad side up, plastic side down. Place the endoscope in the center of the pad.

Fold both of the clear plastic flaps into the center, over the endoscope.

Pull the drawstrings located on the left and right sides of the pad to form a bag.

The bag is closed and the scope is ready for transport.

Order#: 0434N
Size: 41” x 36”
Units / Case: 100 Pads
Endoscope Tip Guard
Protect the endoscope tip from damage and costly repairs. Single-use and latex-free.
Order#: 1500TG
Size: 1 1/4” x 5”
Units / Case: 100 Guards

Non-Absorbent Scope Bumper
Unlike open cell foam bumpers, the Non-Absorbent Scope Bumper does not capture or hold residual moisture that could lead to the formation of bacteria colonies. Single-use and latex-free.
Order#: NA2500
Size: 1 5/8” x 3”
Units / Case: 200 Bumpers

Countdown™ Scope Tag
Alert hospital staff about endoscope reprocessing expiration dates. Made of waterproof synthetic paper. Single-use and latex-free.
Order#: CD3000
Size: 12” x 1.75”
Units / Case: 200 Tags (2 packs of 100)
First Step™
Flexible Endoscope Bedside Kit

Immediate bedside cleaning.
The First Step Bedside Kit simplifies the cleaning process, and provides the supplies needed to prevent bioburden from drying and solidifying in the channel.

- 100% compliant with SGNA and manufacturers’ guidelines
- Safe for use on all flexible endoscopes
- Available with a variety of cleaning pads
- First Step Pouches are user-friendly and space-efficient
- Ensures the proper dilution of enzymatic detergent
- Available in 100 ml, 200 ml and 500 ml sizes

From the SGNA Standards of Infection Control in the Reprocessing of Flexible Gastrointestinal Endoscopes:

Immediately after removing the scope from the patient, wipe the insertion tube down with a lint-free cloth or sponge soaked in a freshly-prepared enzymatic detergent solution (cloth should be single-use, or high-level disinfected, or sterilized between cases). Place the distal end of the endoscope into the appropriate detergent solution and suction a large volume of detergent solution through the endoscope until clear. Finish by suctioning air.

Ready-To-Use First Step Kits
Convenience of use increases staff compliance and turnover time. The ready-to-use detergent ensures a properly mixed formula every time. The combined effect is 100% compliance, 100% of the time.

The Add Water First Step Kit
The Add Water Kit contains concentrated Simple2 Multi-Tiered Enzymatic Detergent in a convenient stand-up pouch.

All First Step Kits contain Simple2™ Multi-Tiered Enzymatic Detergent. Simple2 effectively dissolves blood, fat, tissue, protein and most other forms of organic material. Simple2 is low-foaming, non-toxic, non-corrosive, latex-free, neutral pH and safe to use on all flexible endoscopes.
The Ready-to-Use First Step Kit
Includes pre-diluted Simple2 Enzymatic Detergent and an endoscopic cleaning pad.

The First Step Add Water Kit
Includes concentrated Simple2 Enzymatic Detergent and a cleaning pad in a resealable stand-up pouch.

Add water to the Kit when you are ready to use it. The concentrated detergent can be diluted in the pouch, no additional mixing container is required. The Add Water Kit maximizes storage space and reduces freight costs.

Tabletop Kit Holders
Order#: FS74
Size: 7”x 4”
Order#: FS94
Size: 9”x 4”

Keep Kits within reach.

Wall Rack
Order#: WR95M
Size: 12”h x 7”w x 7”d
Detach, capture and remove biofilm with Draco Technology.

Draco deep-cleaning removes more biofilm. Healthcare facilities are finding it difficult to clean biofilm from endoscopes and other surgical instruments. As biofilm colonies develop, the extreme stickiness of the extracellular polymeric substance (EPS) matrix makes them very difficult to remove. Enzymatic detergents alone are not able to remove these colonies. Technologically advanced microfiber and cleansing foam enable the Draco Pad to remove biofilm by first detaching colonies with the deep-cleansing foam layer, and then capturing and removing colonies with the Draco Pad’s split microfiber layer.

- **Non-abrasive deep-cleansing foam layer** – engineered for extreme scrubbing at a microscopic level. Safe for use on delicate optics.
- **Split microfiber layer** – captures microscopic particles as small as 4 microns.
- **Inner contour foam layer** – allows the pad to easily wrap around endoscopes for thorough cleaning.

**The results are in…**

In a comparative test study performed at the Center for Biofilm Engineering at Montana State University, the Draco Pad was shown to remove considerably more MRSA biofilm than competing products.

</tr>
</tbody>
</table>

The test Indicated: The Draco Pad removed biofilm much more effectively than the urethane pad.
**Tubular Sponge**

A dual-function endoscopic sponge, designed to mirror the contour of a flexible endoscope. The Tubular Sponge is not only a cleaning sponge, but it can help protect the endoscope during transport to the decontamination room.

*Mix with 500 ml of water.

**Draco™ Deep-Cleaning Pads**

Draco Pads effectively remove adhered contaminants on flexible endoscopes and stainless steel surgical instruments. The Draco scrubbing layer breaks the bonds that adhere biofilm clusters to surfaces. The Draco microfiber layer then captures and removes these harmful pathogens.

**Gemini™ Twin Cleaning Pads**

Two interlocking Pads packaged together. One Gemini Pad is used to wipe down the scope during manual cleaning at the patient’s bedside and then discarded. The second Gemini Cleaning Pad is designed to protect the endoscope during transport to the decontamination room where it can then be used to further wipe down and clean the endoscope.

Disposable Endoscopic Channel Brushes

Single-Use and disposable channel cleaning brushes. Cygnus Medical offers a variety of endoscopic channel cleaning brushes designed to meet your endoscope reprocessing demands. Nylon bristles clean efficiently and are safe for use in endoscope channels.

CB1015
Disposable Endoscopic Channel Brush
Compatible Channel Sizes: 1.0 mm – 1.5 mm
Brush Diameter: 2 mm
Brush Length: 10 mm
Total Length: 1000 mm
Units per Case: 50 Brushes

CB2024
Disposable Endoscopic Channel Brush
Compatible Channel Sizes: 2.0 mm – 2.4 mm
Brush Diameter: 3 mm
Brush Length: 20 mm
Total Length: 1800 mm
Units per Case: 50 Brushes

CB2845
Disposable Endoscopic Channel Brush
Compatible Channel Sizes: 2.8 mm – 4.5 mm
Brush Diameter: 5 mm
Brush Length: 20 mm
Total Length: 2300 mm
Units per Case: 50 Brushes

VBD1005
Disposable Double-Ended Valve Brush
Brush Diameters: 10 mm and 5 mm
Brush Lengths: 30 mm and 20 mm
Total Length: 150 mm
Units per Case: 50 Brushes

BB10
Bristle Button Brush
Brush Diameter: 3 mm
Brush Length: 25 mm
Total Length: 102 mm
Units per Case: 100 Brushes
(25 Units per Bag, 4 Bags per Case)

Dragontail Microfiber Endoscopic Channel Brushes

Advanced microfiber technology removes contamination at a microscopic level.

The Dragontail Channel Brush offers a revolutionary approach to cleaning flexible endoscopes and other cannulated surgical instruments. The Dragontail cleaning element is constructed of multiple lint-free Draco™ Microfiber strands, able to capture particles at a 4 micron level. Unlike bristles or silicone discs, which glide over adhered contamination, the microfiber cleaning element detaches, captures and removes gross contamination.

- Most “push-through” style channel brushes are very passive and lack friction. Most have fewer than 600 bristles.
- The Caterpillar Brush’s “pull-through” design and 80,000 bristles drastically increases the amount of friction and cleaning action.
